

VACD Hackathon Harness — Reference

Everything the harness provides · backing services, network, dev container, tooling

github.com/valico-ch/govtech-hackathon-2026-immunization

HL7 FHIR R4

openEHR

CH VACD

Swiss GovTech Hackathon
2026

THE STACK

five default-on backing services, plus an opt-in example platform, all peered on one bridge network

PRE-INSTALLED TOOLCHAIN · in the dev container

LANGUAGES & RUNTIMES

Java 25 Kotlin 2.3.21 Node 22 Python 3.13

BUILD & SOURCE TOOLS

Maven Gradle SDKMAN gh (GitHub CLI) Docker-outside-of-Docker

AI CODING ASSISTANTS

Claude Code Gemini CLI Codex CLI

MCP SERVERS (CONFIGURED)

openEHR — direct CDR access Playwright context7

QUICK START · from inside the dev container

1. BRING UP THE BACKING SERVICES

```
docker compose up --wait
```

multi-stage build of FHIR server; ~60-90s on first run, <5s after

2. SMOKE-TEST A SERVICE

```
curl $FHIR_SERVER_1_URL/metadata
```

returns a FHIR CapabilityStatement · env vars are pre-exported

3. (OPTIONAL) ADD THE EXAMPLE PLATFORM

```
docker compose --profile example up --wait
```

then open <http://localhost:8888/demo> in the browser

PRE-EXPORTED ENV VARS

FHIR_SERVER_1_URL FHIR_SERVER_2_URL CDR_URL
CDR_USER CDR_PASS MAPPER_URL
